

BENCHMARKING SERVICE

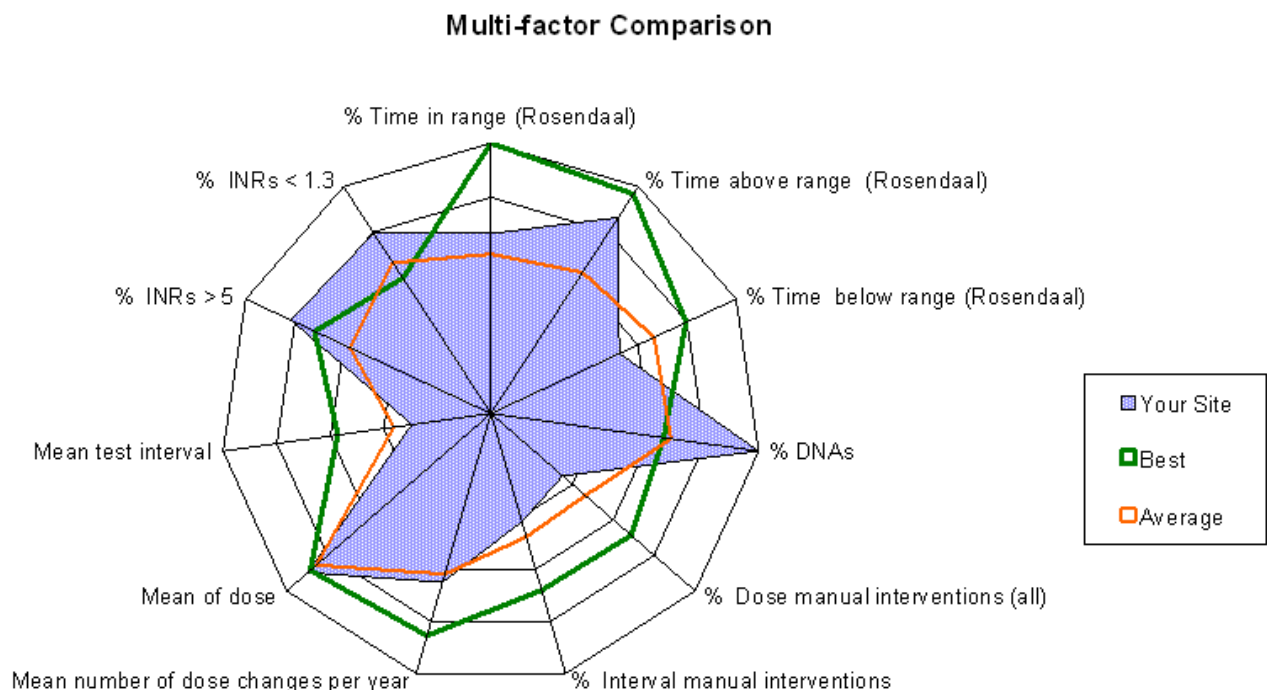

Anonymised Comparison of Your Centre's Performance

Join over 100 anticoagulation centres around the world who use the DAWN AC benchmarking service and see how your organisation ranks compared to others

BENEFITS:

- Monitor key performance measures
- Satisfy quality assurance principles - cannot improve a process until it is measured
- Satisfy many internal audit requirements
- Easily produce statistics that are otherwise time-consuming and complex to produce
- Enable comparison of performance against other sites

Sample benchmarking graph showing several measures for your site against the same measures for the 'best' site and the average across all sites

This chart compares several measures for your site against the same measures for the 'best' site, i.e. the site with the highest time in range. The average across sites for each measure is also shown. The further out the measure goes, the better it is.

The primary focus of the DAWN AC benchmarking service is to provide a forum for benchmarking of pertinent operational and clinical performance or outcome measures and indicators to support and enhance the clinical practice of each member organisation. All data is reported and extracted anonymously.

Reports include:

- A comparison of your site against a summary of all sites participating in a particular run plus the sites with the best and worst performance
- A review of your sites performance through the weeks of a patient's treatment
- A comparison of your site with previous runs (assuming that you have participated in prior data collections)

Statistics include:

- Number of patients and INRs for that range / time period
- % time in, below and above range using the Rosendaal method
- % INRs within 0.5 and 0.75 units of the target INR as discussed in the third edition of the Guidelines on Oral Anticoagulation (*Haemostasis and Thrombosis Task Force*)

% Time In Range Comparison

This chart shows the time in range for all sites in ascending order.
The bar below the line shows the time below range; the bar above the line shows the time above range.
Your site is highlighted in red. The numbers of patients for each site are shown at the bottom of the chart.

DAWN AC Benchmarking Service

- Over 100 registered sites
- Over 324,000 patients in the latest run
- Over 2,690,000 INRs in the latest run
- Currently incorporates over 30 parameters profiling a site's performance
- Covers four therapeutic ranges used for 97% of all patients

Data collection occurs twice a year covering the periods:

**1st May - 31st October
1st November - 30th April**
