

BENCHMARKING SERVICE

Anonymised Comparison of Your Centre's Performance

Join over 100 anticoagulation centres around the world who use the DAWN AC benchmarking service and see how your organisation ranks compared to others

The Benchmarking Service provides a forum for the benchmarking of pertinent operational and clinical performance or outcome measures and indicators to support and enhance the clinical practice of each member organisation.

Compare the performance of your anticoagulation service against your previous results and other anticoagulation services using defined measures such as %TIR; INRs >5; % of manual interventions. All data is reported and extracted anonymously.

Why DAWN AC Benchmarking:

- Monitor key performance measures
- Satisfy quality assurance principles - cannot improve a process until it is measured
- Satisfy many internal audit requirements
- Easily produce statistics that are otherwise time-consuming and complex to produce

Data is presented with a set of on-line graphs/ tables, for example, for Time In Range Comparison:

Reports include:

- A comparison of your site against a summary of all sites participating in a particular run plus the sites with the best and worst performance
- A review of your sites performance through the weeks of a patient's treatment
- A comparison of your site with previous runs

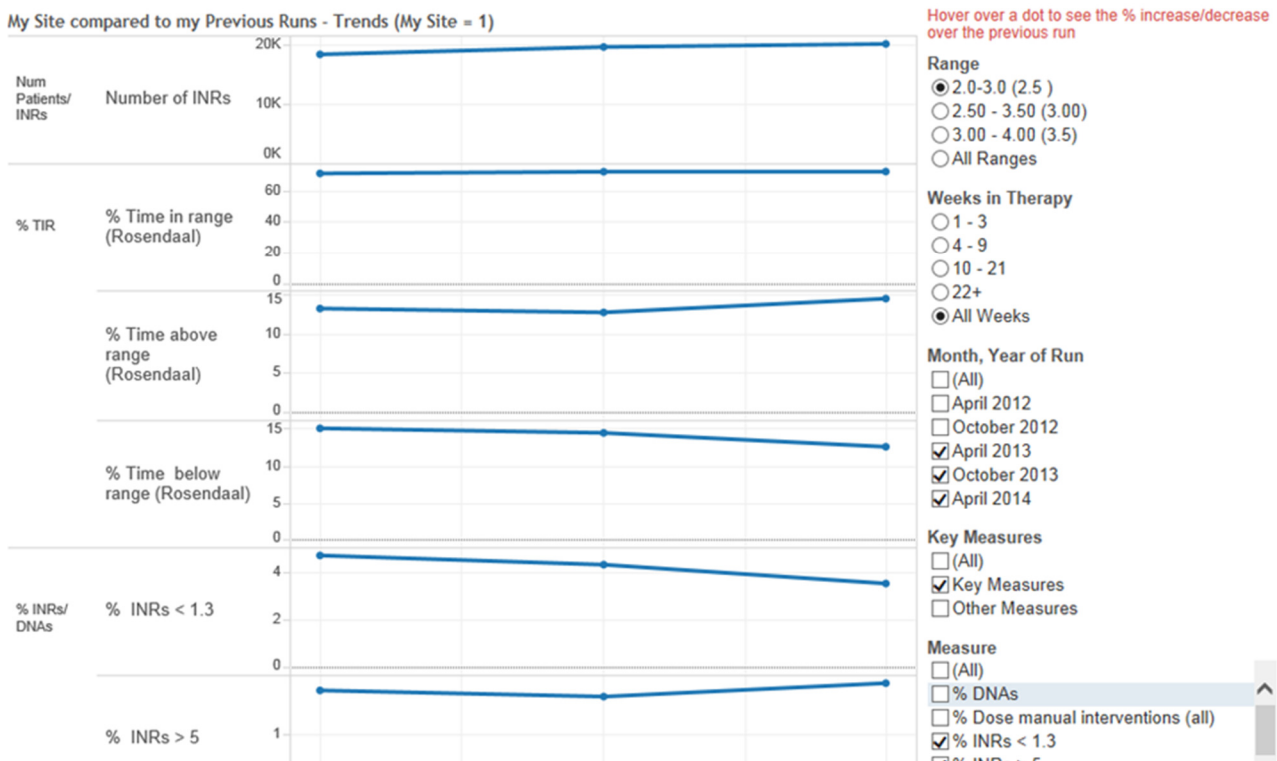

Statistics include:

- Number of patients and INRs for that range / time period
- % time in, below and above range using the Rosendaal method
- % INRs within 0.5 and 0.75 units of the target INR as discussed in the third edition of the Guidelines on Oral Anticoagulation (*Haemostasis and Thrombosis Task Force*)

Benchmarking reports are supplied electronically using an online format that offers the following benefits:

- Makes accessing and distributing the benchmarking reports easier and quicker
- Provides flexibility in viewing and manipulating the data
- The dynamic nature better enables sites to identify strengths/weaknesses and required changes
- Provides better insights for future plans and of changes/improvements to your service over time
- Filters incorporated into the report enable users to interactively refine the data they want to see

Report below involves selecting particular measures to graph so trends/differences are more visible :

DAWN AC Benchmarking Service

- Over 100 registered sites
- Over 324,000 patients in the latest run
- Over 2,690,000 INRs in the latest run
- Currently incorporates over 30 parameters profiling a site's performance
- Covers four therapeutic ranges used for 97% of all patients
