Sustainability and
Transformation Plans
– How AF/Stroke
services may evolve
over the next 5 years

Dr Julia Reynolds PhD

What are STPs

- Route map for how the local NHS and partners make a reality of the 5 Year Forward View
- Within a spending envelope (geographical area)
- Basis for operational planning and contracting
- Population level, not individual level
- Scaling up, cannot be delivered in silos
- Underlying structure to drive new models of care and system-wide change

What will it mean for AF?

- It's big
- May effect how departments are run
- Promoting innovation, preventative and digital technologies
- Keeping patients at home
- Managing patients with LTCs

What can I do?

- What is the call to action for you?
- Data is King and you have plenty through the Dawn system at your fingertips
- How can outcomes for patients with AF be improved?
- More and more patients will be diagnosed. How will you manage

Moving faster quicker

- No-one likes change but...
- Best to be at the forefront
- How can I use Dawn to move faster quicker and why should I?
- Help Dawn to improve and innovate
- Always question

What types of questions can I ask?

- Driving change in others
- Who is well coagulated?
- Who can we see less?
- How can we establish dose better?
- Who is doing poorly and why?
- How can we share, aggregate and benchmark?
- Good data husbandry

What might I see?

- Emerging patterns in the data
- Who is having strokes?
- Could those patients be better managed or managed elsewhere?
- How can issues be raised?
- Analytics and presentation of data can be powerful
- Not just NHS but wider

How can we be better?

- Good outcomes
- Efficiencies
- Can we save lives?
- New innovations to save across a system
- Redesigning and delivering better care
- Finding the right people to help
- What incentives exist?
- This could be really exciting...
